

STIRLING[®]

RANGEHOOD

Suitable for ducted or recirculated installation
Slide-out design

Features:

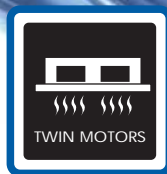

Slide-out Rangehood
Compact slide-out design

Ducting Kit & Carbon Filters
Suitable for ducted or recirculated installation

2 Speed Settings
Two speed settings and two 28W lights

Twin Motors
Twin 80W motors with two speed settings, providing effective air extraction

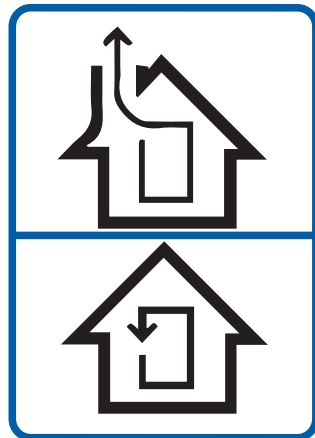

Quick Start Guide

This Quick Start Guide includes only brief instructions. Make sure to read the full instruction manual with comprehensive installation and operating instructions and important safety advice.

Installation

We strongly recommend you get the rangehood professionally installed by a carpenter or cabinet-maker. All electrical work associated with the rangehood installation must be carried out by a licensed electrician. This rangehood can be installed two ways:

- (a) **Ducted installation** requires knocking a hole in the ceiling or wall for the exhaust duct (supplied), so that steam and odours can be vented outside.
- (b) Installation in **recirculating mode** requires use of odour-absorbing carbon filters (supplied and already installed), as the steam is vented back into the kitchen. After the rangehood has been installed, insert the power plug into an appropriate electrical outlet and let the unit run for a few minutes prior to using it while cooking.

Operation

Make sure the rangehood is properly connected to the power supply and the power is switched on at the outlet.

Pull out the front panel to reveal the switches at the corners of the rangehood.

The left switch operates the light. The right one is the operation switch, press it to the “I” position for low or to “II” for high suction power. In the neutral “0” position the motor will be off.

After use, simply push the front panel back in and the fan and light will stop working.

Model Number	STR-BRH
--------------	---------

Speed Settings	2 Speeds
----------------	----------

Warranty	3 Years In Home
----------	-----------------

Version	QSGV1.0
